Description:

Project purpose:

The aim of this project is to create application that generate a daily menu of the user.

Application usage:

This application works with parameters entered by the user. It expects from the user to choose and fill sex, age, weight and height. Based on these data, this app calculates the required daily calorie intake.

The user has the option to choose the type of food that best suits him or her and the type of dishes that wants its menu to include. Then the program generates a variation of dishes that meet all specified conditions.
